CREW BOSS™
ALWAYS MADE IN THE USA

Why CrewBoss

CrewBoss is what it is because of the strong relationships that we build with our customers. From our sales team, to our customer service department, to the sewing floor, every one of us cares about you, your safety, and your experience with CrewBoss. We work hard every day to get you the right gear for your needs, and to ensure that your ordering process goes as smoothly as possible.

American Made

CrewBoss is the only FR Station Wear Brand that is 100% sourced and manufactured in the United States. We are committed to keeping jobs in America, and building your gear domestically also has other important advantages. Our entire management team works just steps away from the production floor, allowing for an unprecedented level of quality control and garment customization.

Built For You

On site manufacturing and made to order production enable CrewBoss to offer an unmatched level of customization. We thrive on learning a department's specific needs, and involve them in the design process to produce garments that perfectly fit their requirements. Whether it is a simple modification to one of our existing products, an item that you have been told for years is not available, or the creation of an entirely new design, we will do what it takes to get you in the right uniforms.

TECASAFE® STATIONWEAR

CrewBoss Class B Shirt

As the most visible part of a uniform, a class B shirt needs to be crisp and professional, while still providing superior protection and functionality. FR rated class B Shirts will not melt or catch fire under turnout gear, and retain their color substantially longer than traditional cotton station wear.

Dual Compliant Uniform Pant

The CrewBoss Dual Compliant Uniform Pant (DCU) is ideal for departments that want to maintain a classic uniform look, while deriving or receieving the benefits of a pant that is certified to both NFPA 1975 and 1977. Dual compliant pants allow for faster response times to wildland fires by removing the need for turnout pants, wildland overpants, or a change into wildland specific PPE. They also cut back on heat exhaustion by offering a higher THL than a traditional double layer wildland system, which allows you to stay in the fight longer.

7.0 oz. Tecasafe Plus SW | Twill | Midnight Navy | SWP1019
6.0 oz. Nomex | Twill | Midnight Navy | SWP1009

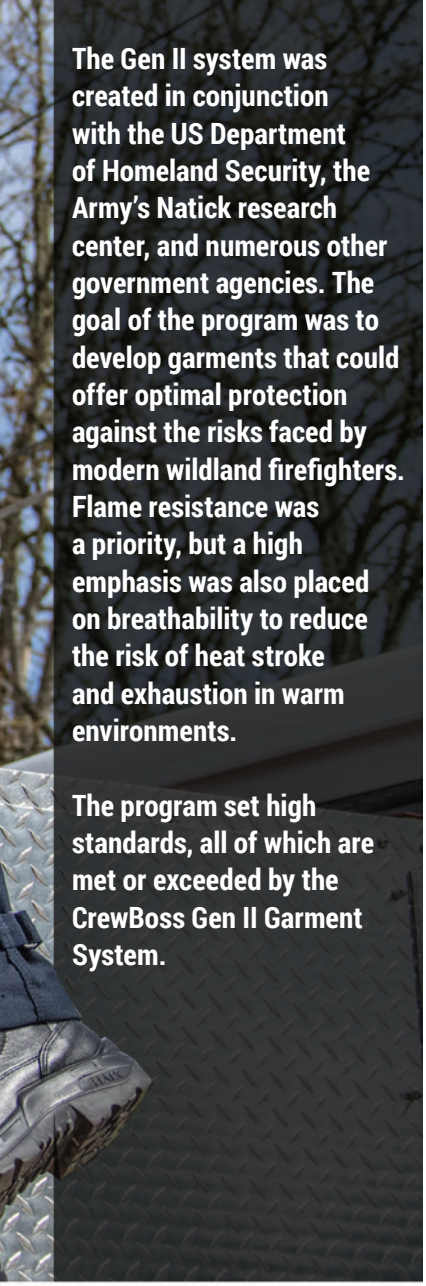
6.8 oz. Nomex IIIA Twill | Black | SWP1013

Optional cargo pockets, internal compartments & ankle closures available, call for more information.

See page 24 for greater detail regarding fabric and color options.



The Gen II system was created in conjunction with the US Department of Homeland Security, the Army's Natick research center, and numerous other government agencies. The goal of the program was to develop garments that could offer optimal protection against the risks faced by modern wildland firefighters. Flame resistance was a priority, but a high emphasis was also placed on breathability to reduce the risk of heat stroke and exhaustion in warm environments.

The program set high standards, all of which are met or exceeded by the CrewBoss Gen II Garment System.

1977 CERTIFIED NFPA®

CrewBoss Gen II Uniform & Tactical Pant

The CrewBoss Gen II Uniform Pant sets new standards for fire protection and breathability. Certified to both NFPA 1977 and 1975, this pant combines a modernized station wear look, with the wildland functionality that you would expect from a CrewBoss Brush Pant. The Gen II Pant is available in a 4 pocket Uniform style, and a 6 pocket Tactical style.

Station Polo

The CrewBoss Station Polo is the first garment in a new class of performance uniforms that refuse to compromise between comfort and protection. This NFPA 1975 certified garment is truly a work shirt loaded with fire service specific features, and made out of a wicking fabric that will keep you cool and dry. Most importantly, unlike poly/cotton blend polos, this one will not burn, melt or drip when exposed to high temperatures.

TECASAFE® STATIONWEAR

Rehab Trailer Kit

The CrewBoss Fire Rehab Trailer was designed from the ground up to meet the NFPA 1584 rehab standard. It provides everything you need to run a full scale firefighter rehabilitation operation and can be operational on-scene in just minutes.

This custom designed support trailer stores and transports everything from both the Vehicle and Cart Kits.

Utilize the trailer as an EMS treatment room with enough seating capacity for four firefighters and an EMT, or a single gurney and multiple personnel.

A few features of the Rehab Trailer include:
- All WHELEN LED interior/exterior lighting
- On board 12v D/C battery system
- Completely washable interior surfaces simplify decon and sterilization

Standard Sizes
Large: 8′ x 20′
Medium: 7′ x 14′
Small: 6′ x 10′

Rehab Vehicle Kit

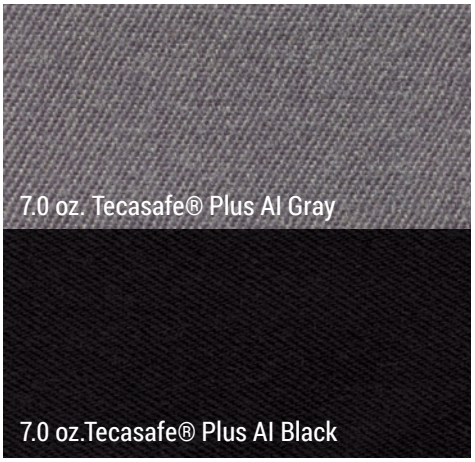
The Rehab Vehicle Kit fulfills the NFPA 1584 rehab requirements while being small enough to be transported by a pickup, SUV or fire apparatus. The kit includes a CB16 Shelter, seating for responders, a toilet with separate privacy shelter, a portable hand washing station, and other accessories to help your team rejoin the fight.

Rehab Cart Kit

The Rehab Cart Kit packages all of the components from the Rehab Vehicle Kit into a heavy duty steel cart to simplify transportation and storage. In addition to the previously listed equipment, the Rehab Cart Kit also includes a misting fan, portable sink, water cooler with cup dispenser, multiple ground tarps, and storage for clothing, blankets, food, and water.

CB16 Shelter

Based on the proven Western Shelter design, the CB16 Shelter (shown below) provides 212 square feet of protected space to get your team out of the weather or the smoke from a fire. Two personnel can rapidly deploy the CB16 without the use of tools or additional equipment. This shelter is an integral part of all three kits.



Station Fabrics & Options

Tencate Tecasafe® Plus AI

Making the best FR station wear requires the best FR fabrics. That is why CrewBoss is partnered with Tencate Protective Fabrics to bring the most innovative materials to the fire service. We were the first station wear brand to offer Tecasafe Plus AI. This revolutionary inherently fire resistant material maximizes comfort, protection, and appearance, while still being cost effective. Using patented Coolderm Technology, Tecasafe Plus AI wicks moisture from the skin, keeping you cooler in the summer, and warmer in the winter. This advanced material is also engineered to stand up to repeated launderings and retain its color wash after wash.

Nomex®

Nomex has been a fixture in the fire service for half a century. Garments made from Nomex are inherently flame-resistant and won't melt, drip, or support combustion in the air. The thermal protection offered by Nomex is permanent, and cannot be washed out or worn away. Nomex is a tough, durable fabric that lasts substantially longer than cotton alternatives.

Defender M

Battle proven in Iraq and Afghanistan, this military grade fabric brings a long list of benefits to the CrewBoss Technical Rescue Ensemble. Defender M offers strength, exceptional moisture management, and dependable flame protection.

Tecasafe® Plus Swiss Pique

Tecasafe Plus Swiss Pique proves that comfort does not have to come at the expense of protection. This inherently FR material was developed as a safer alternative to cotton or polyblend knits, and will not ignite, melt, or drip when exposed to high heat. Tecasafe Plus Swiss Pique comes with Tencate's Coolderm Technology built in, resulting in exceptional moisture wicking qualities and user comfort during hot weather. It was also engineered with superior color fastness and durability in mind, to stand up to years of abuse and multiple launderings.

Embroidery

CrewBoss offers in-house embroidery to simplify your uniform procurement process. Ask us about adding departmental insignia and individual identification to your next station wear order.
